

Value assessment should serve diverse populations and the organizations that provide their care

Diverse patients

Preferences, goals, and perspectives	Race/ethnicity
Baseline health, comorbidities, and risk factors	Cultural background, language
Physical and mental health history	Education and literacy
Sex/gender identity	Employment
Socioeconomic status	Functional status
	Age

Varying decision contexts

Factors considered:

Goals, priorities, and constraints

Organization size and region covered

Characteristics of affected population

Patient and clinician

Healthcare delivery system

Public program

Private payer

Employer purchaser
