

Major Depressive Disorder Value Assessment Model Advisory Group

IVI has established a multi-stakeholder Advisory Group to provide guidance and insight into its research and model development efforts. Comprised of clinicians, patients, researchers, payers, purchasers, health economists and industry actors, these experts will review and give input to the development of IVI project goals, the scope of the major depressive disorder (MDD) model and its component projects, and advise on key informants, expert panelists and researchers and patients that should be included throughout the initiative.

Invited Members
